DESIGN INTENT:

The !Q Tour 78/U name says it all: a 78 hardness urethane ball with an !Q Tour core. In response to the ever-changing environment, the new Controll 78 urethane is PBA® compliant. In addition to a new urethane material, the C³ Core is featured in this unique concept and has been a staple in benchmark reactions for over 10 years. This low RG core helps the ball to read where it needs to which maintains a true urethane-like reaction. The 500-grit surface preparation keeps short patterns easily in check. Expect to see that famous !Q Tour shape, but in a much earlier and smoother version.
